Emergency Communication Solutions

A lack of emergency communication solutions results in a failure of emergency communication, leading to delays and failures in delivering critical messages during emergencies. This can be disastrous, resulting in unnecessary loss of life and property. In this chapter, we will explore the design and implementation of an emergency communication network for disaster events, which affects public or private terrestrial communications infrastructures.

Emergency Communication vs. Notification

Emergency notification systems refer to a collection of methods that disseminate warning information to the public in a timely and effective manner. These systems are activated in disaster events, which affect public or private terrestrial communications infrastructures.

Two-Way Radio - Bobcat Communications and Technologies, Inc.

The Bobcat Communications technical staff is available 24 hours a day in the event of an emergency, with a guaranteed rapid response time.
