Sensory and behavior issues are often complex, intermingled, and pertinent to most clinicians who work with children. This book provides information and strategies for distinguishing between sensory-based and non-sensory-based behaviors, as well as intervention techniques. Topics addressed include causes of behavior, sensory integration dysfunction, environmental factors that trigger behavior, managing challenging behaviors, and implementing sensory diets. The case studies and worksheets included offer a practical roadmap for helping children develop strategies for managing difficult behaviors.

Sensory and behavior issues can happen because of sensory problems. Now does that mean that ALL behavior is sensory related? Well, in a way, yes.

If you need more information on whether it is sensory or behavior, check out the Is It Sensory or Is It Behavior Course. The presenter is a pediatric Occupational Therapist, Cara Koscinski OTR/L who is also a mother to 2 sons with special needs.
