Surgery for dry eyes: punctal occlusion If your dry eyes cannot be relieved with eye drops, it may be necessary to reduce your tear drainage. A procedure called punctal occlusion can be used to permanently or temporarily close off your tear drainage channels, allowing you to retain your own natural tears, without the need for eye drops.
Dry eyes, Sjogrens Syndrome, dry eye treatment | Auckland, NZ
Dry Eye Surgery The most effective method of dry eye treatment, used only in extreme cases, is dry eye surgery. This procedure involves cauterizing the tissue at the opening of the punctum, which seals the eye’s fluid drainage system permanently. Unlike the use of punctal plugs, dry eye surgery is irreversible.

Dry Eye Treatment, Artificial Tears, Punctal Plugs
A weekly follow-up during the first 6 months confirmed the significant improvement of dry eye symptoms in the surgically treated eye. Three months after surgery, a biopsy was performed in the minor salivary gland graft, and the histologic findings revealed the presence of glandular acinus, duct with mucin content, and lymphocyte infiltration.
